

THE WORLD'S LEADING GLOBAL CONNECTIVITY PARTNER INTERNET OF THINGS

Integrating mobility, security and global network connectivity.

Telecom26's Mobile Service Platform allows manufacturers to offer a multi-IMSI solution with full data and SMS service. The platform allows operators, enterprises and mobile VAS partners to customize their services and manage deployed SIMs worldwide. The platform is designed to provide rapid, real-time changes to SIM subscriptions giving the user the ability to offer globally dynamic mobile subscriptions. For example, custom roaming configurations may be developed and managed in real-time to improve coverage and ensure connectivity. In addition, security is integrated into Mobile Service Platform to protect and control confidential data sent to/from the remote devices while providing remote access for control.
